

# Kapolei Civic Center

Honolulu, Hawaii, United States

A very special project with interesting production challenges and we are proud to have been part of the team! **Moca Cream Medium-grained** cross-cut material was supplied for over 2.550sqm of wall panels representing over 220 cubic meters, since the thicknesses were varied and massive: more than 900sqm @ 5,1cm thick; 720sqm @ 7,6cm thick; 220sqm @ 17,8cm thick; ecc., ecc.

The labour work was intensive and ascended to 9.460LM between kerfs', reveals and simples honed edges.
